

## Crystalline Privacy

Crystalline Privacy film is a sparkling vinyl film that simulates frosted crystal glass and creates a soft translucent appearance for application to glazing and is a popular choice in both commercial and residential buildings converting existing plain glass into privacy glass allowing 57% of the light through but not prying eyes, has virtually trouble free maintenance and can often be installed in less that a day, resist fingerprints and can be cleaned as you would any other window.

Crystalline privacy film provides a medium level of opaqueness.

Installing Crystalline Privacy film will allow you the benefits of the glazing in your home or workplace while keeping the people and contents within private.

Crystalline Privacy film allows natural light through so doesn't make the room feel dark.
